|              | coordinated in a      | activities, including          | are the key systems involved                  |
|              | construction project. | mechanical, fluid, electrical, | in the project and how are                    |
|              |                       | and thermal systems. The       | they managed.                                 |
|              |                       | student is expected to:        |   |
|              |                       |                                | Identify important                            |
|              |                       | (A) apply the universal        | deliverables that are found in                |
|              |                       | systems model to               | construction projects and                     |
|              |                       | construction activities;       | identify who is responsible                   |
|              |                       |                                | for their delivery.                           |
|              |                       | (B) identify the inputs,       |   |
|              |                       | processes, outputs, and        | Investigate how various                       |
|              |                       | feedback associated with       | construction companies use                    |
|              |                       | construction systems; and      | technology to manage<br>coordinated projects. |
|              |                       | (C) describe how               |   |
|              |                       | technological systems          | Investigate how the                           |
|              |                       | interact to achieve common     | management of architectural                   |
|              |                       | goals.                         | project differ from civil                     |
|              |                       | -                              | projects. Identify additional                 |
|              |                       | The student selects and uses   | considerations for each type                  |
|              |                       | the proper construction        | from a project management                     |
|              |                       | technology to meet practical   | perspective.                                  |
|              |                       | objectives. The student is     |   |
|              |                       | expected to:                   |   |
|              |                       |                                |   |
|              |                       | (A) distinguish between        |   |
|              |                       | architectural and civil        |   |
|              |                       | construction systems;          |   |
|              |                       | (B) apply construction         |   |
|              |                       | technology to individual or    |   |
|              |                       | community problems;            |   |
|              |                       |                                |   |
|              |                       | (C) describe the factors that  |   |
|              |                       | affect the purchase and use    |   |
|              |                       | of constructed items; and      |   |
|              |                       |                                |   |
|              |                       |                                |   |

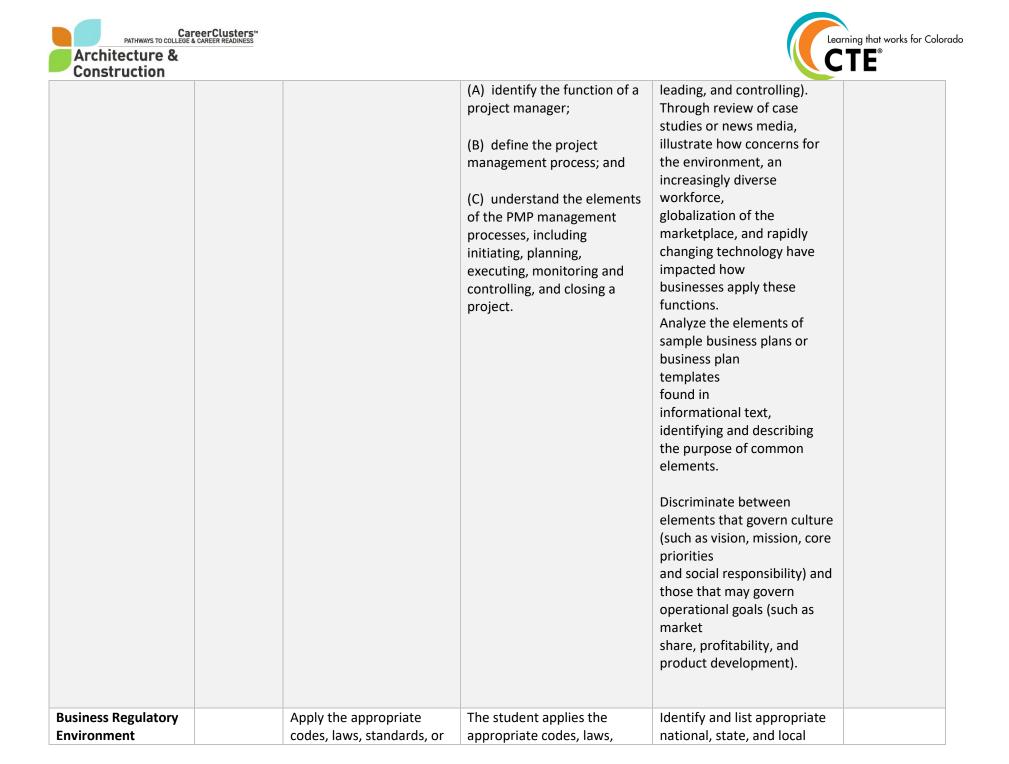

|                                |   | (D) identify and describe the roles of construction.   |  |  |
|--------------------------------|---|--|--|--|
| New Construction<br>Technology | Understand the role of<br>technology for<br>management of<br>construction projects. | <ul> <li>The student investigates<br/>emerging and innovative<br/>construction technologies.<br/>The student is expected to:</li> <li>(A) report on emerging and<br/>innovative construction<br/>technologies; and</li> <li>(B) conduct research and<br/>experimentation in<br/>construction technology.</li> <li>The student describes the<br/>intended and unintended<br/>effects of technological<br/>solutions. The student is<br/>expected to:</li> <li>(A) apply an assessment<br/>strategy to determine the<br/>risks and benefits of<br/>technological developments<br/>in construction;</li> <li>(B) describe how technology<br/>has affected individuals,<br/>societies, cultures,<br/>economies, and<br/>environments;</li> </ul> | Research project<br>management technology<br>used in the construction<br>industry. Identify new and<br>emerging technology and<br>practices. Examine the<br>popularity of the technology<br>and evaluate against cost<br>and other factors.<br>Consider the regional impact<br>of a large construction<br>projects. Investigate the<br>economic impact and the<br>personnel needs required for<br>the project. Discuss how<br>construction effects local<br>economies. How do<br>technologies play a role. |  |

| Construction    |  |  |   |
|-----------------|--|--|---|
|                 |  | <ul><li>(C) discuss the international effects of construction technology; and</li><li>(D) describe the issues related to regional and community planning.</li></ul>  |   |
| Quality Control | Understand how quality<br>control is used in the<br>project quality<br>management process. | <ul> <li>The student describes quality<br/>and how it is measured in<br/>construction. The student is<br/>expected to:</li> <li>(A) differentiate between<br/>quality control and quality<br/>assurance;</li> <li>(B) describe different quality<br/>control applications in<br/>construction; and</li> <li>(C) apply continuous quality<br/>improvement techniques to<br/>the construction of a building<br/>or structure.</li> </ul> | Describe how to implement a<br>quality process.<br>Describe how to monitor<br>rework and its related cost.<br>Describe the development of<br>a quality checklist. |
| PMP Basics      | Develop essential project management skills.   | The student understand best<br>practices in construction<br>project management. The<br>student is expected to:   | Describe the management<br>process and examine the<br>functions of management<br>(planning,<br>organizing,  |

| PATHWAYS TO COLLEGE & CAREER REAL<br>Architecture &<br>Construction | ters™<br>DINESS<br>regulations related to                               | standards, or regulations  | Learning that works for Colo<br>CCTE®  |

The<br/>student is expected to:</li> <li>(A) describe the types of<br/>drawings usually included in a<br/>set of plans;</li> <li>(B) identify the different<br/>types of lines used on<br/>construction drawings;</li> <li>(C) identify selected<br/>architectural symbols<br/>commonly used to represent<br/>materials on plans;</li> <li>(D) identify selected<br/>electrical, mechanical, and<br/>plumbing symbols commonly<br/>used on plans;</li> <li>(E) identify selected</li> </ul> |  |
| (F) read and interpret plans,<br>elevations, schedules,<br>sections, and details<br>contained in basic<br>construction drawings;   |              |                          | <ul> <li>(E) identify selected<br/>abbreviations commonly<br/>used on plans;</li> <li>(F) read and interpret plans,<br/>elevations, schedules,<br/>sections, and details<br/>contained in basic</li> </ul>   |  |

| Construction                                   |  |   |  |
|--|--|---|--|
|  |  | <ul><li>(G) state the purpose of written specifications; and</li><li>(H) demonstrate or describe how to perform a quantity takeoff for materials.</li></ul>   |  |
| Safety<br>Considerations                       | Use and apply jobsite-<br>specific safety information.   | <ul> <li>Understand how a company's safety performance affects the profit and loss and its ability to remain competitive in the future. Student is expected to:</li> <li>(A) Describe the duties and responsibilities of a project manager with respect to safety and loss prevention.</li> <li>(B) Identify the direct and indirect costs of incidents.</li> <li>(C) Identify potential areas for loss.</li> </ul> | Describe OSHA's inspection<br>and penalty requirements.<br>Explain how to plan and<br>implement a safety program.<br>Identify the elements of a<br>safety program.<br>Describe employee<br>involvement in safety<br>programs.<br>Describe emergency<br>reporting and response<br>requirements. |
| Communication and<br>Stakeholder<br>Management | Understand the<br>importance of<br>communication and<br>human relations skills in<br>project managers. | Understand the importance<br>of communication and<br>human relations skills in<br>project managers for<br>managing stakeholder<br>engagement and project<br>teams. Student is expected<br>to:<br>A) Identify project<br>stakeholders and the  | Create a list of your personal<br>stakeholders. Explain how<br>would you manage<br>communication for major life<br>event.<br>Identify common<br>communication practices and<br>standards in the construction<br>industry. Discuss the role of  |

|                           |   | <ul> <li>project manager's responsibilities related to stakeholders;</li> <li>B) Demonstrate effective communications skills;</li> <li>C) Explain the importance of understanding human relations requirements; and</li> <li>D) Identify the legal policies that affect an organization.</li> </ul>   | formal and informal<br>communication and when it<br>is used in project<br>management.<br>Identify the legal policies that<br>affect all business<br>organizations. Research any<br>additional legal requirements<br>construction companies<br>have. Explain the importance<br>of ethical conduct in a<br>project manager. |  |
|---------------------------|---|---|---|--|
| Construction<br>Documents | Investigate common<br>construction documents<br>and their use in planning<br>and managing projects. | <ul> <li>Student understands the documents used in the construction industry and how companies use them for project management.</li> <li>Student is expected to: <ul> <li>A) State the various methods used to obtain work in the construction industry;</li> <li>B) Identify the parts of a typical project manual;</li> <li>C) Describe the role of drawings and specifications; and</li> <li>D) Identify the types of contracts used in the</li> </ul> </li> </ul> | Explain the importance of<br>using and maintaining a<br>record of project<br>correspondence.<br>Describe common<br>construction documents and<br>their importance to effective<br>project management.   |  |

| Project Planning                     | Understand the elements<br>that make up the planning<br>phase of project<br>management.                 | <ul> <li>construction<br/>industry.</li> <li>Understand the elements of a<br/>project plan. Student is<br/>expected to: <ul> <li>A) Identify the elements<br/>of a project plan.</li> <li>B) Describe the project<br/>planning process.</li> <li>C) Explain how a work<br/>analysis is<br/>performed.</li> </ul> </li> </ul>   | Create a sample project plan.  |
|--------------------------------------|---|--|--|
| Schedule and<br>Resource Acquisition | Understand how resource<br>acquisition and schedules<br>contribute to managing<br>project deliverables. | <ul> <li>Understand schedule</li> <li>development and resource</li> <li>acquisition techniques used</li> <li>in the project management</li> <li>process. Student is expected</li> <li>to: <ul> <li>A) Describe how to</li> <li>estimate and acquire</li> <li>materials required</li> <li>for a project.</li> </ul> </li> <li>B) Explain the use of</li> <li>purchase orders and</li> <li>contracts in acquiring</li> <li>materials.</li> <li>C) Identify the planning</li> <li>requirements for</li> <li>materials,</li> <li>equipment, tools,</li> <li>and labor needed for</li> <li>a project.</li> </ul> <li>D) Identify types of</li> <li>project scheduling</li> <li>systems</li> | Develop a plan for acquiring<br>and managing the materials<br>needed for a project. Include<br>samples of the documents<br>that would assist a project<br>manager in acquiring<br>resources and making a<br>schedule.<br>Develop a project schedule<br>using the method specified<br>by the instructor. Describe<br>how you would go about<br>making changes to the<br>schedule. |
